

FINAL

ECON498–ADVANCED TOPICS IN ECONOMICS: GENERAL EQUILIBRIUM

MAY 1, 2026

Special Format: This exam will be an exercise in decentralization, coalition formation, and coordination.

You are allowed to work in teams. Teams may form freely, and you may choose to merge with other teams at any point during the exam. In particular, it is possible for the entire class to form a single group and submit a single unified document. Whether this happens or not is part of the exercise.

Each team must submit exactly one set of solutions.

Coordination: You are free to organize yourselves as you see fit. This includes allocating tasks, coordinating writing, and deciding how to combine partial results. You may also choose to exclude members who are not contributing.

Organizing yourselves efficiently is not just helpful, it is recommended.

Submission Format: Solutions must be typed. $\text{\LaTeX}$ is strongly encouraged, and an Overleaf template will be provided. Your submission should be clean, structured, and readable in a single pass.

If you need to include figures, you may draw them carefully on paper, take a picture, and include them in the document. Clean and well-integrated figures are expected. Creating figures directly in $\text{\texttt{TikZ}}$ is encouraged, but not required.

Permitted Materials and Tools: Standard exam rules apply. You may use your class materials (notes, textbook, and references listed in the syllabus). No external sources other than what I have provided.

The use of AI tools is permitted only if explicitly acknowledged in the submission. Any part of the solution must remain fully explainable by the students listed on it.

Structure: Regardless of how you organize yourselves, your final document must present a coherent and well-organized argument. If I cannot follow your reasoning in one pass, I will stop reading and grade accordingly.

Accountability: Every part of the submission must be explainable by the students listed on it. I reserve the right to ask any student to explain any part of the solution. Given prior performance and observed participation in the class, inconsistencies will be evident. There are no free riders. Any violation of these rules, including free-riding or academic dishonesty, will be subject to the strictest academic penalties.

**If something does not work out, do not apologize. Do not be sorry. Be better.
But now, you have the opportunity to be better together.**
